

Engineering for Life Enhancing People's Lives

EPSRC Funded: *Bridging the Gap - Promoting Interdisciplinary Research*
3 year project

Start Date: October 2009

Investigators:

Prof Chris Care: Materials and Engineering Research Institute (MERI)

Prof Paul Chamberlain: Art and Design Research Centre (ADRC)

Prof Steve Haake: Centre for Sport and Exercise Science (CSES)

Prof Nicola Woodroffe: Biomedical Research Centre (BMRC)

Prof Simeon Yates: Communication and Computing Research Centre (CCRC)

Research Network Co-ordinator:

Dr Vesna Milanovic

Project Administrator:

Ms Jennie Harrison

<http://research.shu.ac.uk/engineering-for-life>

Aims

The Network will create multidisciplinary teams to find pioneering ways to enhance peoples' lives.

Themes

- technologies for rehabilitation and assisted living
- materials, technologies and engineering designs relevant to sport, physical activity and medicine
- approaches to problems associated with sustainability

Seedcorn funded EFL Team

Team Members: Alaster Yoxall, Claire Craig, Ann Light, Chris Roast and Katrzyna Machaczek

Project in Seven phases:

- Phase One -Interviews
- Phase Two -Intervention Selection
- Phase Three -Initial Test Methodology
- Phase Four -Expanded Testing
- Phase Five -Technology intervention
- Phase Six -Re-test
- Phase Seven -Dissemination

Project in Seven phases:

- Phase One -Interviews
- Phase Two -Intervention Selection
- Phase Three -Initial Test Methodology
- Phase Four -Expanded Testing
- Phase Five -Technology intervention
- Phase Six-Re-test
- Phase Seven -Dissemination

- Bathing equipment (bath boards and seats), grab rails etc.
- Mobility aids (walking frames, rollators, wheelchairs).
 - Seating.
 - Sleep equipment.
- Kitchen equipment: tap-turners, kettle tippers, plate guards, adapted crockery, drinking devices

Project in Seven phases:

- **Phase One** -Interviews
- Phase Two -Intervention Selection
- Phase Three -Initial Test Methodology
- Phase Four -Expanded Testing
- Phase Five -Technology intervention
- Phase Six-Re-test
- Phase Seven -Dissemination

ENGINEERING FOR LIFE

Enhancing people's lives

Intervention	Cost	Adaptability	Observation	Social Interaction	Total
Bathing Aids	4	2	1	2	10
Mobility	2	3	3	4	12
Seating	2	3	3	3	11
Sleeping	2	5	5	5	17
Kitchen	1	2	1	1	5

Project in Seven phases:

- **Phase One** -Interviews
- **Phase Two** -Intervention Selection
- Phase Three -Initial Test Methodology
- Phase Four -Expanded Testing
- Phase Five -Technology intervention
- Phase Six-Re-test
- Phase Seven -Dissemination

- Phase Six-Re-test
- Phase Seven -Dissemination

ENGINEERING FOR LIFE

Enhancing people's lives

- it wasn't obvious what some of the tools were for (i.e explanation was needed)
- a lot of the tools felt very "patienty"
- cheap and tacky feel to much of the equipment (poor quality)
- the packaging was actually hard to open
- tap-turners consistently came off the taps
- there was some difficulty accessing the fridge and the cooker. The handles were not adapted for use.

- emptying waste into the bin was also seen to be difficult
- the amount of movement was quite "wearing"
- poor portion size
- the plug for the kettle was not adapted even though the kettle was
- washing some of the items seemed difficult
- lifting the bowl of water was trick

Conducted a series of interviews:

- In the home
- In the kitchen
- 3rd Year Design students
- In a Restaurant

ENGINEERING FOR LIFE

Enhancing people's lives

ENGINEERING FOR LIFE

Enhancing people's lives

- Results analysed using Nvivo

"can I sit in a corner so no one can see me?"

ENGINEERING FOR LIFE

Enhancing people's lives

ENGINEERING FOR LIFE

Enhancing people's lives

ENGINEERING FOR LIFE

Enhancing people's lives

- [one] slip-cast ceramic body
- [two] thermal ceramic insulated top handle
- [three] thermal ceramic insulated lower handle
- [four] easy pull tea infuser
- [five] flat front for stable tipping

Tilt.

With thanks to Dan Perkins £rd
Year BA Design Student

Enhancing people's lives

The EFL experience

ENGINEERING FOR LIFE

Enhancing people's lives

ENGINEERING FOR LIFE

Enhancing people's lives

the united kingdom vs the united states:
C U L T U R E C L A S H !!!

i'll learn how to
play cricket if
you'll learn how
to drink watered
down beer

DEAL

- I can't get meetings
 - Jennie can't get timesheets
- Vesna doesn't get info for meetings
 - Etc

- Things work with people we know and have built rapport with
- Otherwise they often fall apart or take longer and we have no mechanisms to deal with it

- This leads to frustration, and or illness

- Not least late and poor delivery of research output

ENGINEERING FOR LIFE

Enhancing people's lives

- I believe Efl despite having support mechanisms is typical of peer academic behaviour

- What motivate people is a complex issue

ENGINEERING FOR LIFE

Enhancing people's lives
